The Annual Staff Presents

The Matchapungoan

Nineteen Hundred and Sixty Eight

Dedication

The Annual Staff of 1968 proudly dedicates this edition of the Matchapungoan to a most outstanding teacher. She has unselfishly helped us through the years with unlimited energy and enthusiasm. Looking back on our high school years, we will instantly think of all she has done for us. It is with much pleasure that we present this annual to a most deserving teacher, Mrs. Carolyn Lloyd.

**TGS has come a long way in just three years.
All the fertilizer materials plants are on stream
at the Lee Creek phosphate complex.**

From any vantage point, the sprawling fertilizer materials complex at the Lee Creek phosphate mine in North Carolina leaves no doubt that Texas Gulf is taking its place as a major supplier to the world's rapidly expanding fertilizer industry.

In the foreground are storage sheds for (from left) run of pile (ROP) triple superphosphate, granular triple superphosphate and diammonium phosphate. The three product plants are located at the far ends of the 528-foot long sheds. The tall, slender framework of the superphosphoric

acid plant rises just beyond the windowed ROP plant.

At left center, large rail loading towers straddle the railroad tracks. In the distance is the Pamlico River leading to the Intracoastal Waterway.

Just as we keep moving ahead at Lee Creek, Texas Gulf Sulphur Company is pleased to see you moving ahead and extends congratulations to you, the graduating class of 1968.
